

MDM: Master Data Manager

It is a file-based, configurable import/export pipeline that receives file (JSON, CSV, JSONL) from any source (manual upload, SFTP, SaaS, webhooks, code).

All core entities live under package `com.hubspot.datamanager`.

(1) `DataManagerConfig` (`dmz-oms-udml-entity/HummapEntityModel.xml`)

`importServiceName` → Service called to process the upload file.

`exportServiceName` → Service called to export data of a file.

(2) `DataManagerLog`

Audit record for every import/export operation.

`uploadFileContentId`

`exportFileContentId`

`logTypeEnumId`

↳ `dmzImport` / `dmzExport`

`shopifyConfigId`

(3) `DataManagerContent` (`OmsEntities.xml`)

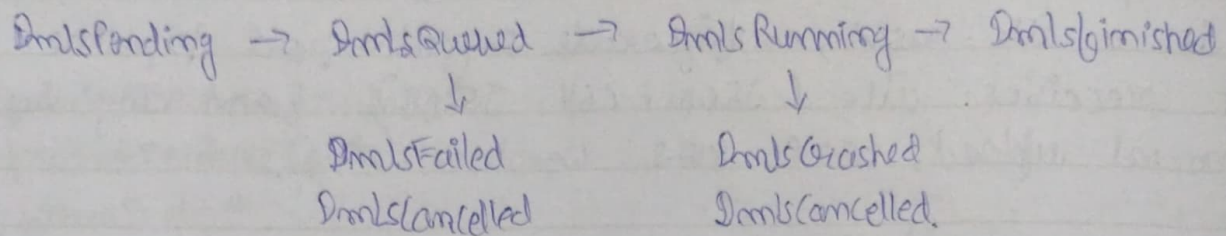

Track each file artifact associated with a log (upload file, error file, log file, export file)

`fileName`, `fileSize`, `contentLocation`

`logContentTypeEnumId`

↳ `dmzImported`, `dmzExported`, `dmzError`

Status Flow (status type → DataManagerLog)

* MDM runs with two dedicated thread pools, visible in the OMS UI at oms → about screen. (oms / screen / oms / about.xml)

→ Priority Pool

Handle high-urgency imports (eg → shoplog order sync)
(Real-time customer order)

→ Normal Pool

Handles bulk or background imports (eg → product catalog, inventory)
Lower-urgency.

* UI: Mdmg.hdwax.io

(a) about → both MDM worker pool.

eg → MDM Priority Pool

Thread → Active:0 Cur:0 Max:3

Queue → Cur:0 Rem:10

(b) MDM → admin console

↳ Config

↳ Imports

List of all DataManagerConfig entries, links to download uploaded file, error file, log file.

(c) Shopify order Integration Setup Screen

file : shopify-oms-bridge / screen --- → ShopifyOrderIntegrationSetup.xml

UI → Shopify → Shopify order Integration Setup.

OMS Bridge Configuration

Config ID

Configured Service

Sync Shopify order

shopifyOrderService.sync # ShopifyOrder

Bulk order History

ShopifyOrderSyncHistoryService.create # syncHistory

Process bulk order History record from

Shopify JSONL migration

* MDM in the Shopify order Import Flow :-

Shopify

order(scheduled) update webhook

AUS SAS Queue (for shop)

Called every N seconds by scheduled Job

Master Job : consume - ShopifyOrder - SAS

service : co. naturax. shopify.order.syncOrderImport.consume

read message in batches of 10

extract order ID

Service : stage # ShopifyOrder

for each orderID: call get # ShopifyOrderDetail

↳ (graphical to Shopify)

→ All JSON file save to datamanager/order/brow/[UU] o.s.json

MSM upload

Service : Co.hatmax.utilityServices.upload # DataManagerFile

- create DataManagerLog (status = Pending)
- create DataManagerContent (type = Import Imported)
- Put log into MSM Priority worker pool ~~and~~ queue.

MSM Runner picks up log from queue.

Status : Pending → Queued → Running

Read importServiceName from DataManagerContent.

↳ (Config Id = 'Sync-ShapifyOrder')

↳ shapifyOrderServices.Sync # shapifyOrder

Service : Sync # shapifyOrder (shapify oms-bridge)

↳ Read JSON file

↳ Iterate each Order in the array.

↳ For each order

- map # shapifyOrder (shapify order Mapping service)
- Resolves product via Road Identification.
- create/update orderHeader
- create orderItems, orderRole, orderContactDetails
- create orderPaymentPreference.

Status : Running → Finished.

DataManagerLog updated with success.
