

System Message :-

(1) system-message (ServiceEntities.xml)

System-MessageId → PrimaryKey

System-message-type-id → (FK → system-message-type)

System-Message-Remote-id → (FK → System-MessageRemote)

StatusId → SmsgConfirmed, SmsgConsumed, SmsgSent
is-Outgoing → Y/N

Fail-count → 3 (usually max count) → then ~~SmsgError~~

Remote-Message-Id → M100055

Message-Text → .json

(runtime: // datamanager / shopify / BulkBrandAndVariants / --- json)

The SystemMessageType tells the system what the message is (eg → Shopify order-import), the SystemMessageRemoteId tells the system which specific external system to connect to.

Imagine your CMS is integrated with three different Shopify stores. You would create three different SystemMessageRemote record in your database.

(i) systemMessageRemoteId = "Shopify-US" (contains the URL)
= "Shopify-UK" (and APIs keys)
= "Shopify-CA"

(2) SystemMessageType

System-Message-TYPE-Id* → ex (what kind of message this is)

System Message Type - Id	Description
BulkFulfillmentOrderQuery	Bulk fulfillment order query system message
BulkOrderHeaderQuery	Bulk order header query system message
BulkOrderHistoryResult	History query
ExportInventoryCount	Export order work efforts.
ShopifyBulkImport	Parent System MessageType for Import

Produce Service Name → Kaise service call karo message bananakiye
 Consume Service Name → Service that process message
 Send Service Name → that send message
 Receive Service Name → that receive message

Receive-Path → remote server par file kahan dhunde (SFTP path)
 Send Path → Remote server par file kahan dale (outgoing)
 ke diye path/pattern

[file: maven/framework/entity/ServiceEntities.xml (line 409)]

yeh entity batati hai ki ek particular type ke message ko kaise handle karna hai.

(3) SystemMessageRemote

yeh entity ek remote system ka "address book entry" hai.
 Har Shopify store, ya hai bhi kisi system, ek SystemMessageRemote record ke through represent karta hai.

ye basically batata hai:

- remote system kahan hai
- kaise authenticate karo use
- kesa use use karo.

Connection fields :-

SystemMessageRemoteId → Unique ID

Description → Human-readable

SenderURL → Outgoing message ke liye URL - Shopify API endpoint

ReceiverURL → Incoming message ke liye URL - External system se

Authentication fields :-

username, password, Public Key, Private Key

↓
(RSA Public Key)

↓
(RSA Private Key)

SharedSecret → HMAC signing ke liye - encrypted

authHeaderName → "X-Shopify-Access-Token"

messageAuthEnumId → Auth Method jo use hodi hai - receive karte

SendAuthEnumId → Auth method used to send.

Auth Types (Enum) :

- SmartNone
- SmartLogin
- SmartHMACSha256
- SmartHMACSha256Timestamp

(u) SystemMessageError - log

SystemMessageId* : Kis message ka error hai.

errorDate* : Same message ke multiple errors alog timestamp.

attemptedStatusId : Status se status mein jate waqt error aaya.

errorText : Actual error message.

↓
Example :- ErrMsg/Consumption
poor baail hua

Message life cycle

(1) Outgoing Message

Queue# SystemMessage
→ SmsgProduced

Send# ProducedSystemMessage
→ SmsgSent

(2) Incoming Message

Receive# IncomingSystemMessage
→ SmsgReceived

Consume# ReceivedSystemMessage
→ SmsgConsumed

* Total Status : 9 hote hain.

- (1) SmsgProduced → outgoing message ready hai
- (2) SmsgSanding → Abhi bhej raha hai
- (3) SmsgSent → Bhej diya
- (4) SmsgReceived → Paya hai
- (5) SmsgConsuming → Process ho raha hai
- (6) SmsgConsumed → Process ho gaya
- (7) SmsgConsumed → Dono side se confirm kiya
- (8) SmsgRejected → Remote no reject kcor diya
- (9) SmsgCancelled → Cancel kcor diya
- (10) SmsgError → Fail ho gaya

- ★ Outgoing Message - Status ka sabse
Real example :- OMS - Shopify ko callignment bhejni hai.

queue # SystemMessage call hote hai

[SmsgBroduce]

→ Message DB Mein create hote hai

[SmsgSend]

→ Shopify ne accept kiya, sendMessage
mitte hai.

[SmsgConfirmed]

→ Confirmation aa gaya.

or

[SmsgRejected]

→ Shopify ne reject kar diya

- ★ Incoming Message :-

receive # IncomingSystemMessage call hodi hai

[SmsgReceived]

→ Message DB mein save hua

[SmsgConsuming]

→ consume service start hodi hai
(order create ho raha hai)

[SmsgConsumed]

→ Process complete, order oms mein aa gya

[SmsgConfirmed]

→ final confirmation

or

[SmsgRejected]

→ failed.

Kai thi stage se $\rightarrow$ [SmsgError] $\leftarrow$ jail hua (SystemMessageError
recieved banamata hai)

(Scheduler retry karta hai)

Outgoing : SmsgError $\rightarrow$ SmsgProduced / Sending / sent

Incoming : SmsgError $\rightarrow$ SmsgReceived / consuming / consumed

Kai thi active stage se cancelled $\rightarrow$ SmsgCancelled (retry)

Wapas thi ja sakta hai

SmsgProduced / SmsgReceived

$\rightarrow$ Hamara alpha Id $\rightarrow$ SystemMessageId (eg $\rightarrow$ 2000)

Remote System ka Id $\rightarrow$ RemoteMessageId (eg $\rightarrow$ shopify ka bellmat Id)
